## PROJECTS

Coin Man Game

- Android application which is a hybrid of Google's Floating Cloud game and the Super Mario game.  
Link : [github.com/AyushiGupta26/Coin-man-game.git](https://github.com/AyushiGupta26/Coin-man-game.git)

Instagram Clone

- Uses Parse Server to keep track of users and to store the images uploaded by them. A user can view his feed, follow and unfollow other users.  
Link : [github.com/AyushiGupta26/Instagram-Clone.git](https://github.com/AyushiGupta26/Instagram-Clone.git)

Whats the Weather App

- Displaying the weather after entering the city name using the OpenWeather API.  
Link : [github.com/AyushiGupta26/whats-the-weather](https://github.com/AyushiGupta26/whats-the-weather)

Twitter Clone

- Uses Parse Server to manage the users (login-sign in) and the tweets tweeted by them. A user can follow and unfollow other users, tweet and view its feed.

Memorable Places App

- A user can add a new place as his memorable place by long click on the location in the map and can view the saved locations.
